Project Profile

Project Name	Hotel Management
Objective :-	To provide online hotel room booking
Front End Tool :-	CSS ,Java script
Back End Tool :-	MYSQL
Framework :-	php
Editor :-	Visual Studio code
Application :-	Website
Team member :-	Sarah Chauhan (E.NO- 21032211025) Mr. Mahir (E.NO- 21032211048)
Internal Guide :-	Prof. Prachi Maniyar

Existing System

- ❑ Totally manual work.
- ❑ Online room booking is not possible.
- ❑ Time consuming.
- ❑ Each an every entry has to be search manually via register.

Need for new system

- The new system is computerized system.
- Easy response and offer facility.
- To provide online room booking.
- Time saving.

System Requirement(Server Side)

Hardware (Minimum)

- ❑ Processor :- Intel 5
- ❑ Ram :- 4GB
- ❑ Hard-disk :- 50GB

Software

- ❑ Framework :- php
- ❑ Database System :- MySQL
- ❑ Operating system :- Windows

System requirement(client side)

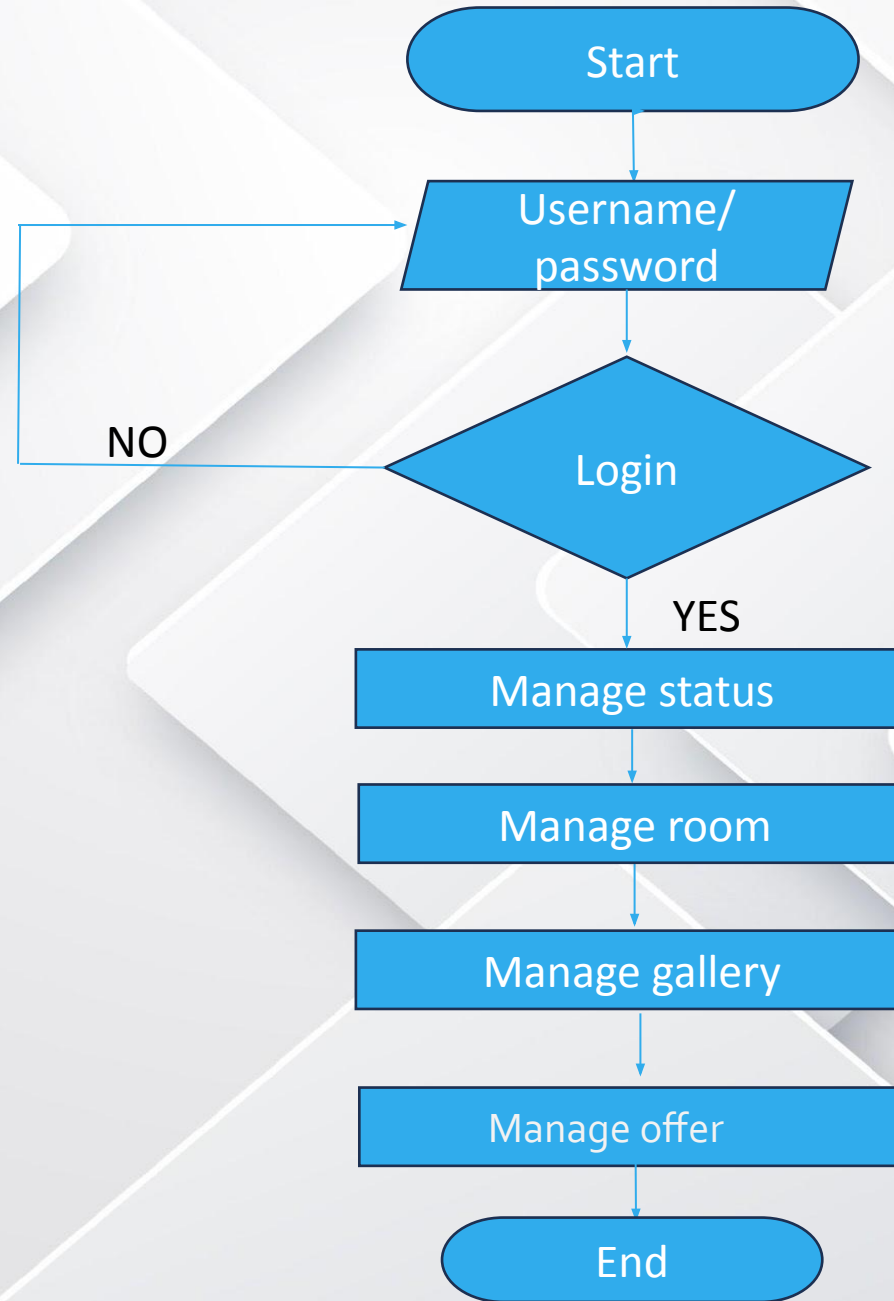

Hardware (Minimum)

- ❑ Processor :- Intel 5
- ❑ Ram :- 2GB
- ❑ Hard-disk :- 50GB

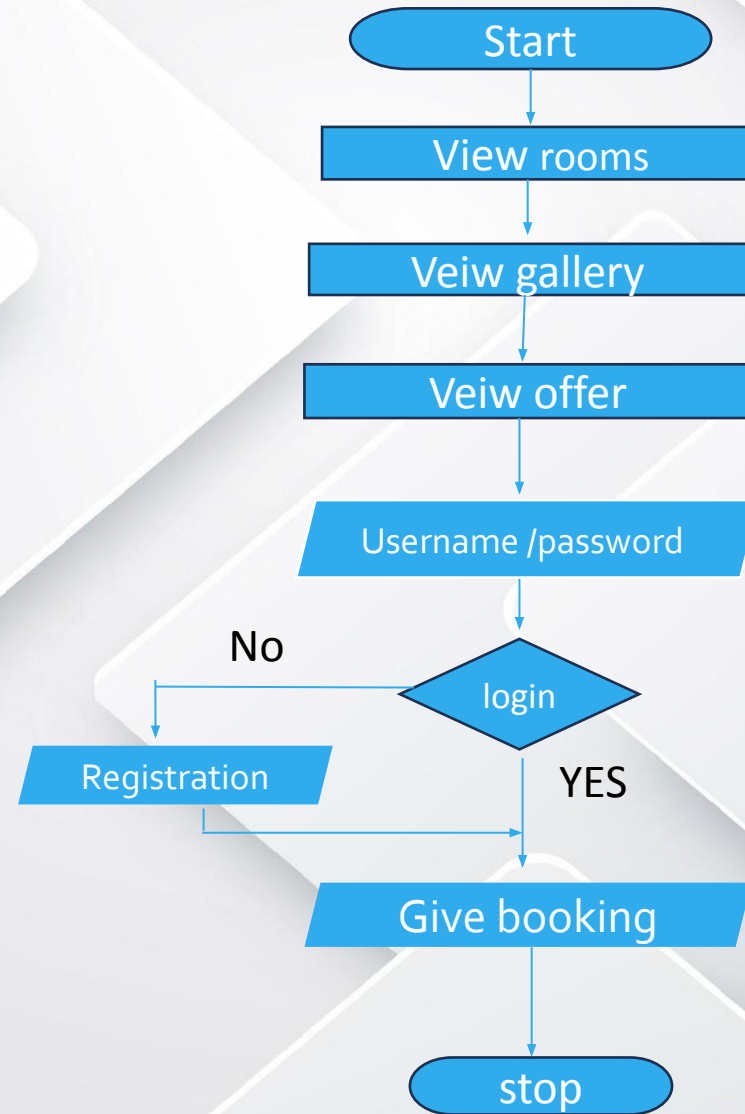

Software

- ❑ Browser :- Chrome and any compatible Browser
- ❑ Operating System :- Windows and any compatible OS

Offer table

No.	Field	Data type	Constraint	Description
1.	Id	int(15)	Not null	Id info
2.	Name	char(15)	Not null	name info
3.	discription	char(20)	Not null	Discription info

Process Description

- The project named “HOTEL MANAGEMENT” is about Room Booking system.
- Admin handle all task of the Hotel and also handle Hotel details in the website.
- So there are mainly two users of the system.

- **ADMIN**
- **USER**

- Admin has full control over the system , Admin can manage all over the system.
- Such as maintain the Registration, view Form, etc.
- user is able to Book the Room and also view the Hotel information and Images.

Process-Algorithm

Admin Process Algorithm

Step 1. Start

Step 2. Enter Admin_id and Password.

Step 3. Check Login valid or not if not then go to **step 1.** else go to next step.

Step 4. Manage gallery

Step 5. Manage room details.

Step 6.manage offer

Step 7. Stop

User Process Algorithm

Step 1. Start

Step 2. View Hotel Information and gallery.

Step 3. View room.

Step 4. View gallery.

Step 5. View offer.

Step 6.give booking.

Step 7. Stop

TESTING

We have use following method for testing the system.

□ **Specification Testing :-**

- The specification testing is what program does in some various condition is.
- we check this system to give wrong username ,password, wrong data then system display message for input correct data.

□ **Code Testing:-**

- The code testing is examining the logic of program.
- we have testing all path of program, path means to specific combination of condition that handle by program.

□ **Unit Testing:-**

- Unit testing is focused on verifying small portion of functionality. Unit testing is important part where each module and process of application is to be test by possible input sets and desired output.
- we have check different type of modules like admin module, Visitor module etc.

Post-Implementation Review

After the system is implemented and conversion is complete, user usually conducts a review of the system.

- In this system all Requirements are fulfilled.
- The Admin can easily delete the record in efficient way.
- This system is user-friendly and easily understand.
- The performance level of users has improved.
- The new system needs less manpower, provides information at Time & saves data for document management.

Future Enhancement

Some are the expansion which we have thought of are:

- Try for to make system more user friendly.
- Improve search Facility.
- Admin can gives facility to the visitor which can see the status about organization's all information.
